2017 — 2026

AT A GLANCE

Nine years of civil work across the Sunshine Coast and South East Queensland, delivered with our own crews and plant — from rural road upgrades to \$14M hillside subdivisions, and government road maintenance run day and night.

CONTRACTS COMPLETED

250+

VALUE OF CONTRACTS COMPLETED

\$110M+

CLIENTS

70+

CURRENT EMPLOYEES

70+

CURRENT FLEET SIZE

Machines and trucks, maintained in-house

50+

IN-HOUSE CREWS

Two pipe crews, a concrete crew and a rockwall crew, with our own plant and operators.

ACCREDITED

TMR accredited, QBCC licensed and certified to ISO 9001, 45001 and 14001.

BOTH ROLES

We work as Principal Contractor on our own projects, and as a subcontractor to the principal contractor on others.

Grandview Horizons, Coolangub — 31-lot hillside subdivision

WHO WE ARE

OWNER-LED, LOCALLY BASED

Sunshine Coast Civil delivers civil infrastructure across the Sunshine Coast and South East Queensland. Our services include roads and earthworks, drainage and stormwater, water and sewer, concrete and structures — all delivered with our own crews, plant and workforce of 70-plus.

Sunshine Coast Civil is owner-led. The Director is directly engaged in the management of projects, so decisions are made quickly and clients deal with the people accountable for the work.

Hilltop, Maleny — residential subdivision

OUR HISTORY

FROM PIPE CREWS TO LAND DEVELOPMENT

Liam Kelleher founded Sunshine Coast Civil in November 2017 in response to demand for additional pipe crews around the Sunshine Coast. The business began in pipe infrastructure and expanded into land development after securing and delivering projects including Stockland's Aura development.

Nine years on we deliver projects of all sizes with our own crews and plant, including government road maintenance carried out around the clock. We are engaged by commercial builders, land developers, and local and state government.

HOW WE CONTRACT

PRINCIPAL CONTRACTOR OR SUBCONTRACTOR

We work both ways. On our own projects we hold the head contract as Principal Contractor and carry the programme, the site and the safety system. On others we deliver the civil scope as a subcontractor.

Both are routine, and the same crews and standards apply either way. Whether it is a large commercial development or a smaller residential job, the approach is the same: get it right the first time.

VISION, MISSION AND VALUES

VISION

To be the preferred contractor in civil construction, through quality, integrity, safety, innovation and client satisfaction. Our team handles complex projects and adapts to change while holding a high standard.

MISSION

We rely on repeat work from valued clients. Projects are completed in a way that delivers quickly and, most importantly, delivers a quality product to the client's satisfaction.

SIX CORE VALUES

HOW WE WORK

The end product matters, and so does the journey. Our people have the attitude and the technical ability for complex work, and we build the relationships that get a project right the first time.

LEADERSHIP

Decisions made on site, by people who are accountable for them.

INTEGRITY

We say what we will do, then we do it.

SAFETY

Everyone goes home in the same condition they arrived.

ENVIRONMENT

Sediment and erosion control planned before the first machine moves.

INNOVATION

GPS machine control and methods that shorten programmes.

IMPROVEMENT

Every job reviewed, so the next one runs better.

BUSINESS STRATEGY

Steady growth built on strong client relationships and a reputable brand. A dynamic and flexible management style, with hands-on management of every project. The Director is directly engaged in the management of projects, which keeps overheads lower than larger contractors and allows competitive pricing without compromising quality.

OUR SERVICES

Four service groups, most of it delivered by our own crews and plant. Where a scope sits outside what we handle in-house we engage approved subcontractors and manage them to our own standards.

ROADS AND EARTHWORKS

- Bulk earthworks and site preparation
- Road construction and maintenance
- Rural roads and driveways
- Pavement works — bitumen and concrete
- Cut and fill, excavation and grading
- Subgrade preparation and compaction
- Carpark construction and line marking preparation
- Sediment and erosion controls
- High-efficiency sediment (HES) basins

DRAINAGE AND STORMWATER

- Stormwater drainage and pit construction
- Pipe laying and pit installation
- Bio-retention basins
- Detention and retention basin works
- Dam construction
- Gross pollutant traps and water quality devices
- Open channel and swale construction
- Headwalls and wing walls

WATER, SEWER AND COMMS

- Water main installation
- Trunk water mains
- Sewer reticulation and trunk sewer mains
- Sewer and water pump stations
- Communications conduit and pit installation
- Service relocations and upgrades
- Trenchless installation methods

Water mains are installation only. We do not carry out connections.

CONCRETE AND STRUCTURES

- Kerb and channel
- In-situ manholes — sewer and stormwater
- Concrete driveways and carparks
- Retaining walls
- Rock walls, including grouted rock walls
- Footpaths and shared paths

SUBCONTRACTED SCOPES

Road surfacing, asphalt, rock wall construction and other retaining structures, concrete driveways, traffic control and tree clearing. Subcontractors are closely managed to our safety and quality standards, programme and specification.

HOW WE DELIVER

DELIVERY CAPABILITY

Our crews are multi-skilled across pipelaying, concreting, earthworks and roadworks. That lets us move people where the programme needs them, shorten timelines and keep one team accountable for the whole civil scope.

We run our own pipe, concrete and rockwall crews with our own plant and operators, so the bulk of a civil package is delivered in-house rather than passed down a chain of subcontractors. A crew can carry a job from bulk earthworks through drainage and services to kerb, pavement and final trim, and where a scope genuinely sits outside what we do we bring in approved subcontractors and manage them ourselves.

GPS MACHINE CONTROL

Trimble, Topcon and Unicontrol systems fitted across much of the excavator fleet and one grader, with rover kits and base stations. Higher precision, less rework, shorter timeframes.

LICENCES AND TRAINING

All site workers hold current licences and undergo regular training. Candidates are assessed before they join, and competency is kept current on the job.

WHERE WE WORK

SERVICE AREA

PRIMARY

Sunshine Coast — Caloundra to Noosa, and the hinterland including Yandina, Nambour and Coolumb.

SECONDARY

South East Queensland broadly, including Brisbane, Moreton Bay and the Gympie region.

FURTHER AFIELD

Projects outside the usual area where the job is worth travelling for. We have delivered work as far north as Mackay.

Our Cordwell Rd office and yard at Yandina is the central hub for storage and maintenance of machinery and materials.

PLANT AND EQUIPMENT

Sunshine Coast Civil operates a fleet of 50+ machines and trucks, maintained by our in-house mechanic to keep downtime off the programme. Below is a summary, not an exhaustive list.

EXCAVATORS

21

2 1.7 t	4 5 t	3 8 t	4 14 t	6 20 t	2 30 t
------------	----------	----------	-----------	-----------	-----------

Hitachi, Kubota, Komatsu, Doosan, CAT and Yanmar. Seven machines are 2023 or newer.

EARTHMOVING AND COMPACTION

- 1 Dozer — Cat D5K LGP, VPAT XL blade, ripper
- 2 Graders — CAT 12M, WCM 120H
- 1 Front end loader — Komatsu WA200PZ-6
- 5 Skid steer loaders — Kubota and CAT
- 4 Rollers — 11 t padfoot, 11 t smooth drum, 12 t pad, 2.6 t tandem
- 3 Site dumpers

TRUCKS AND TRAILERS

- 2 Articulated dump trucks
- 4 HR tippers
- 2 MR trucks
- 2 Light tippers
- 3 Water trucks
- 2 Service trucks
- 1 Site truck
- 5 Trailers — box, dog and plant

Demountable water tanks fitted to tippers give additional water carting from 2,000 L to 8,000 L.

ATTACHMENTS AND SMALL PLANT

Rock breakers in 30 t, 20 t and 5 t classes · excavator grabs in 23 t, 14 t and 8 t classes · augers · sieve buckets · compaction wheels and tilt hitches · trencher, slasher, broom and roller attachments for skid steers · vibrating plates, jumping jacks, concrete vibrators, flex drive pumps, generators from 3.2 kW to 8 kVA, pressure washers and cut-off saws.

COMPLIANCE

ACCREDITATIONS AND LICENCES

Certified management systems and current accreditation across quality, safety and environment. Certificate numbers and expiry dates are provided on request for tender and prequalification submissions.

TMR

TRANSPORT AND MAIN ROADS ACCREDITATION

Prequalified to deliver state road works, including maintenance carried out day and night under live traffic.

QBCC

QUEENSLAND BUILDING AND CONSTRUCTION COMMISSION

Fully licensed, with financial reporting maintained to category requirements.

9001

AS/NZS ISO 9001 – QUALITY

Certified quality management system, with ITPs, hold points and conformance records on every project.

45001

AS/NZS ISO 45001 – SAFETY

Certified occupational health and safety management system, run by our HSEQ Manager across every site.

14001

AS/NZS ISO 14001 – ENVIRONMENT

Certified environmental management system covering sediment and erosion control, water quality and waste.

MEMBERSHIP

MASTER BUILDERS QUEENSLAND

We are a member of Master Builders Queensland, and partner with MAS National and Diggerman Training on apprenticeships.

MANAGEMENT

LIAM KELLEHER

Director

In the industry since 2003 · Diploma in Construction Management · Diploma in Quantity Surveying

Liam founded Sunshine Coast Civil in 2017 and remains directly involved in every project the business takes on. He is an experienced project manager and estimator with a career in civil going back to 2003, and his involvement runs from the tender through to completion.

That end-to-end view is deliberate. Pricing the job and then living with it on site means the programme, the methodology and the budget are set by someone who will be accountable for them.

Liam started out in New Zealand as a project manager in structural and civil construction. In 2008 he moved into estimating and managing large-scale projects for Multi Civil Construction, including main roads restrengthening and earthquake protection works. He relocated to Australia with his family in 2012 and became a key estimator for one of the Sunshine Coast's civil contractors, tendering projects valued between \$2M and \$150M.

He holds a Diploma in Construction Management and a Diploma in Quantity Surveying. Combined with a deep knowledge of the local market, that lets Sunshine Coast Civil price competitively without cutting into the standard of the work.

"CLIENTS DEAL WITH THE PERSON WHO CAN MAKE THE DECISION. THAT IS THE WHOLE ADVANTAGE."

MANAGEMENT

CHRIS HACKETT

General Manager

20+ years in civil · Law degree (UK) · Quantity Surveyor and Commercial Manager · \$150M+ delivered in Queensland since 2016

Chris joined as General Manager in 2022 and holds the commercial side of the business — estimating, procurement and project management. That freed Liam to focus on business development and client relationships.

He has over 20 years in civil construction, starting in the United Kingdom at 19. A UK law degree gives him a strong grounding in contract law, and he has worked as a quantity surveyor and commercial manager across both markets.

At Sunshine Coast Civil, Chris sources suitable tenders, measures and prices work from tender plans and documents, and leads final negotiations and contract reviews with clients. He also oversees material procurement and subcontractor negotiation, and makes sure cost management is followed by supervisors through delivery.

After 15 years in the UK and ten on the Sunshine Coast, Chris knows the local market and puts weight on client relationships — which is where a good share of our repeat business comes from. He has negotiated and delivered over \$150M of civil projects in Queensland since 2016, with a track record in value engineering and material cost savings.

"VALUE ENGINEERING IS NOT CUTTING CORNERS. IT IS FINDING THE CHEAPER WAY TO BUILD THE SAME THING."

OPERATIONS AND FINANCE

SAM DENNISS

Operations Manager

Sam runs day-to-day operations — crews, plant allocation and project coordination across every active site.

He started in the seat of a machine and worked his way up, which is why plant management and site sequencing come naturally to him. He also maintains the plant asset register as the fleet changes.

Organised, detail-focused and firm on safety and quality standards, Sam is where the programme meets the yard.

KAYLEE BALLINGER

Financial Controller

Kaylee oversees the company's financial operations, from accounts and payroll through to reporting that supports the business as it grows.

She has over 12 years in accounts management and leadership, including running a team of seven, on top of 20 years in office administration across Australia, the UK and Canada.

Complex financial processes handled accurately and on time — which matters to clients as much as it does to us.

CONSTRUCTION MANAGEMENT

JEREMY CLARKE

Construction Manager

Jeremy's background spans residential subdivisions and major roading projects, and he brings both to the jobs he runs here.

He holds a strong focus on safety, quality and efficiency, and delivers to client expectations inside the budget and the programme.

His ability to adapt as a project shifts, and to see a problem coming before it lands on the critical path, is what makes him valuable to clients as well as to us.

SIMON CORNWELL

Construction Manager

Simon has been in civil since he was 18, in roles from site surveying through to project management — 30+ years in total.

He oversees construction projects end to end: resourcing, the construction team, quality standards and safety protocols on site.

He also acts as a technical adviser to clients, finding cost-saving options in how the work is built. Clients get expert guidance and practical alternatives, not just a price.

CONTRACTS AND HSEQ

BILLIE DAVIES

Contracts Administrator

Billie administers our contracts — variations, claims, correspondence and the paperwork that keeps a job clean from award to final account.

She came to us with a background in administration, customer service and project coordination across several industries, including a stint at Master Builders Queensland running regional operations, financial administration and events.

Organised and precise, Billie is usually the reason a claim goes out on time and correct.

PAUL RAWSON

HSEQ Manager

Paul, our vigilant HSEQ Manager who champions Health, Safety, Environment, and Quality at Sunshine Coast Civil.

With his unwavering commitment to ensuring the highest standards, Paul plays a pivotal role in upholding excellence and fostering a secure and responsible work environment.

ESTIMATING AND BUSINESS DEVELOPMENT

ANDREW HUSSEY

Estimator

Andrew is our experienced Estimator, pricing and preparing tenders across the full range of civil projects we take on.

Andrew's accuracy, commercial judgement and eye for detail give clients confidence in our numbers and set each project up to run on budget.

KATE CLARKE

Business Development Manager

Kate is our dedicated Business Development Manager who builds client relationships and identifies new work opportunities while leading marketing, brand and content for Sunshine Coast Civil.

Kate's industry knowledge and personable approach play a key role in the company's continued growth and reputation.

ON THE GROUND

SITE CREWS, WORKSHOP AND SUBCONTRACTORS

SITE CREWS

Foremen, leading hands, machine operators, pipe layers, labourers, truck drivers and fitters. Most of our people are proficient in more than one discipline — pipelaying, concreting, earthworks and roadworks — which lets us shift resources as a job moves and keep timelines tight.

Everyone holds current licences and undergoes regular training. Candidates are assessed before they join the team.

WORKSHOP

Our workshop crew maintains and services the fleet in-house at the Yandina yard. Servicing our own plant means breakdowns are dealt with quickly and machines go back to work rather than waiting on an external booking.

SUBCONTRACTORS

We handle most civil works in-house and engage approved subcontractors for road surfacing, asphalt, rock wall construction and other retaining structures, concrete driveways, traffic control and tree clearing.

Subcontractors are closely managed against our safety and quality standards, the programme and the specification. That is what keeps risk, disputes and delays down on a job with several trades running at once.

SEVENTY-PLUS PEOPLE

Management, administration, workshop and site crews — the team at our Yandina yard, 2025.

SECTION TWO

PROJECTS AND CASE STUDIES

Our key personnel were delivering civil work long before Sunshine Coast Civil was formed in 2017. Between them they have completed demolition and land clearing, sewer, stormwater and water reticulation, bulk and detailed earthworks, retaining wall construction, subdivisions, road and bridge construction, basement excavation, main roads maintenance and civil mining support.

Asphalt paving and compaction, internal roadway

26

WHO WE WORK WITH

CLIENTS AND AFFILIATES

Builders, developers, principal contractors, consulting engineers and councils across South East Queensland. A good share of our work is repeat business.

COUNCILS

We have delivered work for Sunshine Coast, Noosa, Somerset Regional and Fraser Coast Regional councils, and in council areas across Brisbane, Moreton Bay, the Gold Coast, Bundaberg, Gladstone and Mackay.

PROJECT TYPES

Bulk earthworks, subdivisions, commercial developments, educational facilities, social housing, road construction and maintenance, and civil works for building projects.

LOCAL EMPLOYMENT

We are a Sunshine Coast company and we employ locally. Supporting the local economy and working with like-minded family businesses, rather than relying on foreign-owned multinationals, is a deliberate choice.

Our team of 70+ comes from a wide range of backgrounds, and every one of them brings something different to the projects we take on.

APPRENTICESHIPS

Through partnerships with MAS National Apprenticeship Network Provider and Diggerman Training, we support the training and employment of young people in civil construction.

Civil needs operators, pipe layers and foremen coming through behind the current crews. Taking on apprentices is how that happens.

COMMUNITY FUNDING

We take part in blood donation drives, council initiatives and charitable events supporting non-profit social causes in the region that supports our business.

Blood donation drives and charity events across the region — our crews take part throughout the year.
